BTA 1500

Dension's BTA 1500 is a Bluetooth interface which works as an accessory to the Gateway 500 and allows the driver to connect a compatible phone to the audio system in the car. Once the phone has been paired to the BTA, the driver can make and receive telephone calls without touching the phone itself (handsfree), and the caller will be heard through the speakers in the car. Calls can be initiated using the original radio, steering wheel controls or iDrive controller in the car, and where there is a suitable screen in the vehicle, the driver can browse the phone book, redial the last number or perform virtually any call and function the phone is capable of.

BTA 1500 also supports the A2DP profile, allowing users to stream music directly from the phone to the car's audio system via Bluetooth. All the convenience you need with the minimum amount of driver distraction. The BTA1500 plugs into the Dension Gateway 500 and is hidden away in the glove box or behind the dashboard. Simple seamless integration.

Using your bluetooth phone

BTA is simulating the original telephone kit that would have been fitted to the vehicle. A comprehensive user guide comes with your BTA 1500 but here is a simple guide to how it operates.

PORSCHE
Press the TEL button on the radio. Names or numbers will appear on the screen. Select and call using the steering-wheel or radio controls. The caller's ID will be displayed on the screen.

MERCEDES
Press the TEL button on the head unit you can select a contact to call. Number input is available via the key pad. The caller's ID will be displayed on the screen and the cluster.

BMW
From the start up screen select communication. Your phone book will now appear on the screen. Use iDrive or steering wheel controls to select and make a call. The caller's ID will be displayed on the screen.

AUDI
Press the TEL button on the radio. The phone-book now appears on the screen. Select a contact using the steering wheel control or control wheel. The caller's ID will be displayed on screen and on the cluster display.

Simple, seamless integration

▶ Integrating your phone

The Dension BTA 1500 accessory allows you to make and receive hands free phone calls with your original car radio. You will hear the caller's voice on your car's original speakers and can control the call using your radio controls and, if you have them, steering column controls. The BTA 1500 uses cutting-edge Bluetooth technology to 'pair' your phone with your car radio so that information can be sent between the two devices.

▶ Music Streaming

On many phones nowadays, as well as making calls, you can store large quantities of music. Dension's BTA1500 features the A2DP technology (Advanced Audio Distribution Profile) which allows the user to stream this music, using Bluetooth, into the car's entertainment system so that it can be heard through the car speakers. The Gateway 500 in the car will allow the driver full control of the phone's content from the radio, steering wheel or iDrive controls.

▶ Browsing

If your car already has a screen fitted, Dension Gateway can often bring text from your phone onto the screen, to make selecting and calling your contacts quick and simple. Once your phone and radio are paired, a press of a button will bring up all your contacts on your radio screen. Scroll through or do an ABC search to find your contact, press call and wait for an answer. Its that simple!

- ▶ Make and receive handsfree calls in your car.
- ▶ Search your Phone book and view on your original in-car display.
- ▶ Audio through the speakers.
- ▶ Easy install mic.
